

HOW TO ACHIEVE OUTSTANDING RESULTS IN MESOTHERAPY

1. Professional Training
2. Proficient Protocols
3. Precise Techniques
4. Effective Equipment & Supplies
5. Superior Quality Ingredients

TECHNIQUES FOR SUCCESS

Whether you chose to administer Mesotherapy manually or with a Mesotherapy gun the choice of injection technique is important.

Generally, according to the depth, working from the epidermis to the hypodermis, a distinction is made between one of these 3 techniques:

PAPULE: 1 to 2mm, with bevel upwards
NAPPAGE: 2 to 4mm, angle of 30° to 60°
POIINT BY POIINT: deep injections, 4 to 12mm

TIPS FOR PATIENT SATISFACTION

1. *Local Anesthetic* - Applied prior to treatment, not essential but may be helpful for sensitive patients.
2. *Ice* - Applied prior to treatment, ice will achieve the numbness of anesthetic and also help reduce swelling from PPC.
3. *Loose Clothing* - After treatment loose fitting clothing can increase patient comfort particularly after PPC.
4. *Massage* - Encouraged 72 hours after treatment and continued daily between treatments massage can be effective in reducing the instance of nodules.

TOOLS REQUIRED FOR EFFECTIVE MESOTHERAPY

Needles

4mm, 6mm and 12mm 27G needles
4mm, 6mm and 12mm 30G needles

Syringes

5cc to 20cc luer lock syringes
5cc to 20cc slip tip syringes

Multi Injectors

Circular Multi Injectors - 4mm - 7 needles
Circular Multi Injectors - 6mm - 7 needles

Linear Multi Injectors

- 4mm - 5 needles
Linear Multi Injectors
- 6mm - 5 needles

Injection Plates

Circular Injector Plates
- 7 connections
Linear Injector Plates
- 5 connections

AND TECHNOLOGY

Affordable & Effective Mesotherapy Supplies

MESOTHERAPY

Pioneered by the French Physician Dr Michel Pistor in 1952, Mesotherapy is a non-surgical, relatively painless injection procedure that is used worldwide to treat with a broad range of conditions.

This medical specialty specifically targets areas with microinjections of vitamins, minerals, amino acids, conventional medications and homeopathic preparations. These micro injections are delivered directly into the mesoderm to promote the body's circulatory, lymphatic and immune systems to create a biological response and reverse abnormal physiology.

Over 25,000 physicians worldwide today use Mesotherapy in the care of their patients for:

BODY SCULPTING

Stomach, Hips, Buttocks, Thighs, Love Handles, Upper Arms...

FACIAL SCULPTING

Chin jowls, double chin, eye fat pads...

CELLULITE REDUCTION

SKIN TIGHTENING

SKIN REJUVENATION & ANTI-AGING

SCARS & STRETCH MARKS

ALOPECIA

RESULTS BASED ON TECHNIQUES

Results will vary depending on the injection site, the pathology treated, the structure of the dermis, the products injected and the technique applied.

As a guide:

| | |
|---------------------|--|
| Frequency | Weekly, Bi-weekly or Monthly Injections |
| Preparation | Local Anesthetic or Ice may be used. |
| Pharmacology | Patient specific customized cocktails |
| Dosage | Patient specific based on pathology. |
| Technique | Introduction of needle from 2 - 12mm depth. |
| Injections | 0.1 - 0.3ml of the cocktail, with a separation distance of 0.5 - 4 cm. |

POPULAR MESOTHERAPY PROCEDURES

Lipodissolve
MesoLift
MesoBotox
MesoGlow
Cellulift
MesoBoost
MesoSculpt

Stomach, Saddle bags, Bra bulge, Inner thigh bulge, Love handles, Buttocks, Abdomen, Knees, Chin, Neck, Face, Arms, Back, Legs, Hands and Waist all can be treated with Mesotherapy.

INGREDIENTS USED IN MESOTHERAPY

Injections commonly used in Mesotherapy are called cocktails. The following is a partial list of the common ingredients used.

| | |
|-------------------|---------------------|
| Alpha Lipoic Acid | Hyaluronic Acid |
| Aminophylline | Hyaluronidase |
| Artichoke Extract | Isoproterenol |
| Ascorbic Acid | L-Carnitine |
| Biotin | Minoxidil |
| Caffeine | Pentoxifylline |
| Collagenase | Phosphatidylcholine |
| D-Panthenol | Procaine |
| DMAE | Retinoic Acid |
| Finestamide | Yohimbine |
| Glycolic Acid | |
