

Facial treatment by Lipolysis complemented by clostridium botulinum type A toxin and dermatological fillers

Dr. Franz Hasenschwandtner, Director Network Lipolysis, www.doc1.at
Director of Spa- and Therapycentre, Bad Leonfelden, Austria, Europe.

Injection type lipolysis has found widespread application throughout the world. Our Network Lipolysis alone has about 1000 participating physicians in 53 countries. They all achieve a good treatment results following our Lipolysis protocols.

The article would present two cases of the facial treatment. The first we would show the response to injection Lipolysis only and the second case would show a result of combined treatment with Lipolysis (LY), clostridium botulinum toxin (BT) and injectable dermatological filler (FR).

First case study:

The patient is a 54 year-old lady complaining about wrinkles on the lower face and neck.

The protocol used:

We use Phosphatidylcholine (PPC) mixture composed of 48% PPC, 48% NaCl, 3% pentoxifylline and 1% Vitamin B Complex . The quantity injected per one injection is 0.5 cc and the distance between individual injections is 1,5cm. (Fig. 1)

Fig. 1: the location of the injections and visible skin reaction to the injected solution

All facial treatments result in a swelling which persists for 5 to 7 days (Fig. 2)

The swelling disappears after a period of about one week. Irritation of tissue combined with drugs action initiates a cascade of events

leading to collagen and elastin production and starts the rejuvenation process. The skin and subcutaneous tissue become more elastic and regain its youthful tension. (Fig. 3)

It takes about 8 weeks for the full treatment result to be visible.

Fig. 4 shows the post treatment result after 60 days.

The treatment described was performed using only one Lipolysis treatment and you can clearly see the result after a period of 8 weeks: The double chin has disappeared, the skin on the neck is much tighter and the wrinkles have been reduced.

Before

8 weeks later

Second case study:

The patient is a 40 year-old woman who wants a smaller and more beautiful face.

For the treatment we use the previously described mixture and space injections at a distance of 1,5cm. The quantity of solution per injection is the same 0.5 cc and the depth of delivery remains the same.

The number of injections are as follows:
- two injections on the cheeks

- five on the jowls and
- three on each side of the double chin.

On the right, one can see the result after 8 weeks: jowls and double chin have been reduced, lateral parts of the cheeks and the nasolabial folds have also decreased.

Before

8 weeks later

To complete the treatment, we injected (FR) into the upper lip (only 0,2mls on each side), lifted the eyebrows on each side with (BT) and performed superficial injections with non-linked hyaluronic acid (aesthetic Mesotherapy – one session of Mesolift).

Below we can see the convincing proof of the treatment effectiveness just after one session of (LY) and one session of additional treatment with (BT), (LY) and Mesolift

After

In general it can be said that facial treatments, performed according to the protocol of Network Lipolysis are very successful and mostly only one or two sessions are needed. Following parts of the face can be treated with lipodissolve injections:

- Glabellar fold
- Nasolabial fold
- Cheeks
- Jowls
- Double chin
- Neck.

BOARD CERTIFICATION IN MESOTHERAPY

**BECOME A LEADER IN YOUR FIELD
HELP SET STANDARDS
INCREASE REFERRALS
GAIN PRESTIGE**

The American Board of Mesotherapy is the only organization currently offering Board Certification in Mesotherapy. The Board welcomes M.D. & D.O. practitioners from all forms of Injection Lipolysis (Mesotherapy, Lipothrapy & Lipodissolve) as long as your training was from a Physician supervised and taught training program. We have members and applicants from all of the more prominent teaching programs, such as those offered by (in alphabetical order) Drs. Bissoon, Chubaty, Hansengschwandtner, Jennings, Kalil, LeCoz, Pitera, Rittes and others.

To our knowledge, we are the only organization that encourages and promotes inclusiveness which is reflected by our membership. We invite all practitioners who have recieved formal training to apply for the upcoming Board Certification examination. Support your future; support the Board.

Upcomming exams:

Sunday September 10th, 2006 - Aneheim, California
Sunday January 28th, 2007 - Site to be announced

A comprehensive review course will be offered by the American Mesotherapy Foundation the day prior to the exam. There is a small fee for this highly recommended course.
